Description About Subject Areas

Strategic Planning Cycle

Strategic planning means setting goals, making plans, and doing things to succeed in the long run. It includes planning, doing, checking, and adjusting. This cycle makes sure goals are reached by always looking at how things are going, doing what's planned, checking how well it worked, and changing things if needed because of feedback or changes around us.

Project Management

Project management is the discipline of planning, organizing, and managing resources to achieve specific goals within a defined timeline and budget. It involves coordinating various tasks and activities to ensure the successful completion of a project, which is a temporary endeavor with a specific objective.

Quality management

Quality management in software development involves setting standards, ensuring quality through processes like testing and QA, employing CI/CD for efficient deployment, managing defects, using metrics for assessment and improvement, gathering customer feedback, adhering to standards, and investing in training. This approach ensures high-quality products, customer satisfaction, and competitive advantage.

Human resources Management

HR system covers everything from hiring to training and planning for the future. It lets employees handle their own info and requests, saving time for HR. It can grow and change with the business, is easy to use, and keeps data safe. Considering costs, it also boosts employee satisfaction.

Risk Management

Risk management is a process for identifying, understanding, and responding to hazards that could harm your company. The process encompasses risks of all sizes, both internal and external. From international war down to a simple tripping hazard, you can apply risk management principles to manage and minimize the impact on your people, assets, and operations.

Company Tech Stacks

A company's tech stack is the collection of technologies used to develop and run its digital products and services. Choosing the right stack is crucial for efficient development, scalability, and maintaining competitive advantage in the market.
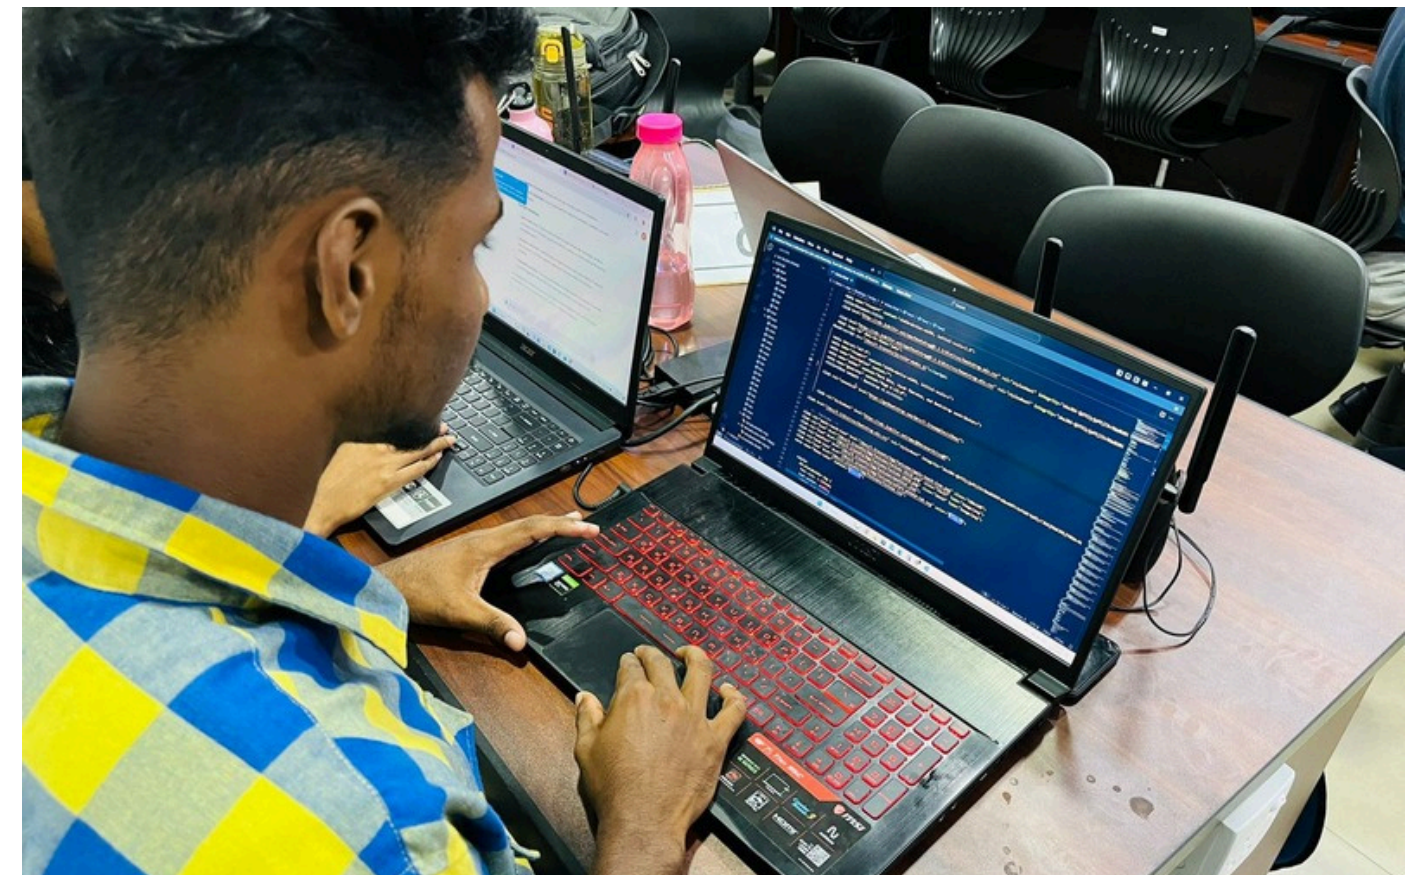

It typically includes,

FrontEnd : - HTML, CSS, and JavaScript
BackEnd : - Java
frameworks :- SpringBoot
Databases :- MySQL
